Power BI Data Visualization

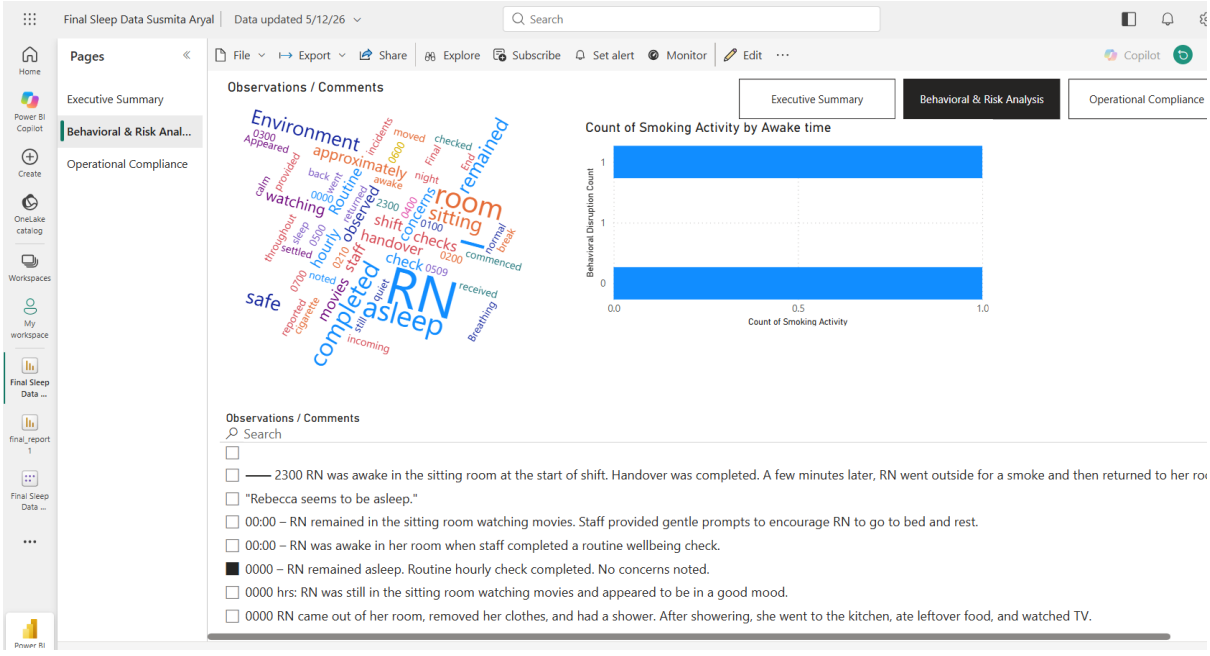

I took the sample data available in Kaggle for patient sleep quality and the behaviour affecting sleep quality. And feed through the Power BI. Did Preprocessing and aimed to create different visuals possible. I practiced creating different summary pages, Different colours, size, shape and writing Power BI queries.

Doing this gave me strong foundation in Data cleaning, preprocessing, Power BI formulas and queries.

1. **Executive Summary**

2. **Behaviour and Risk Analysis**

3. Operational Compliance
