www.github.com/eyeksel

TECHNICAL SKILLS

Languages C#, JavaScript, TypeScript, Python, SQL, HTML/CSS

Frontend React, Vue.js, Angular, Vite

Backend & APIs ASP.NET Core Web API, REST APIs, Node.js, JSON, HTTP, CRUD, CORS

Data SQL Server, SSMS, Entity Framework Core

Tools Git, GitHub, Postman, VS Code, DevTools, npm, Angular CLI

Cloud & Emerging Azure, AWS, Google Cloud, LLM/RAG, WebSockets

EDUCATION

Charles Darwin University - Australia
Masters in Information Technology - Software Engineering / 2025 - Present

Cavite State University - Philippines
Bachelor of Science in Information Technology / 2015 - 2019

FOCUS AREAS

- Full-stack delivery
- System integration
- API testing & diagnosis
- Cross-layer troubleshooting
- Rapid tech onboarding

EVIDENCE

Weekly source code, screenshots, notes and database scripts maintained on GitHub throughout the program.

PROFESSIONAL SUMMARY

Software development student with academic and practice-project experience across frontend, backend, databases, APIs, cloud platforms and emerging AI technologies. Built and troubleshot full-stack applications using TypeScript, React, Vue.js, Angular, C#, ASP.NET Core, Entity Framework Core and SQL Server. Comfortable learning unfamiliar technologies, integrating systems, testing APIs and diagnosing issues across application layers.

ACADEMIC / PRACTICE PROJECTS

Full-Stack Task Manager | *React, Vue.js, Angular, ASP.NET Core, EF Core, SQL Server*

- Developed a shared ASP.NET Core REST API with GET, POST, PUT and DELETE operations and connected three TypeScript frontend implementations.
- Integrated Entity Framework Core with SQL Server for persistent data and tested endpoints with Postman before frontend integration.
- Troubleshot CORS, package dependency and Angular runtime configuration issues using direct API testing and browser DevTools.

C# & SQL Server Console Task Manager | *C#, Microsoft.Data.SqlClient, SQL Server*

- Built a menu-driven CRUD application using parameterised SQL commands and data readers, then evolved the project concept into a full-stack API architecture.

Student Grade Calculator | *C#*

- Created a console application using typed variables, user input, conditional logic and string interpolation to calculate grades and pass/fail results.

Web & Real-Time Technology Practicals | *JavaScript, TypeScript, WebSockets, HTML5 Canvas, PixiJS*

- Completed hands-on exercises across browser, graphics and real-time web technologies as part of the program.

ACADEMIC TRAINING & TUTORIALS

Completed program tutorials and guided practicals in JavaScript, TypeScript, React, Node.js, REST APIs, Python, C#, .NET/ASP.NET Core, Entity Framework Core, SQL/SQL Server, Vue.js and Angular, plus Azure, AWS, Google Cloud, LLM/RAG concepts, WebSockets, HTML5 Canvas and PixiJS.

- SQL practice included SELECT, SELECT TOP, DISTINCT, WHERE, ORDER BY, INSERT, UPDATE, DELETE, NULL handling and AND/OR/NOT conditions.
- Cloud and emerging-technology learning introduced Azure, AWS, Google Cloud, LLM and RAG concepts through structured study and practical exploration.

ACADEMIC / CAREER PREPARATION

- Researched Forward Deployed Engineer requirements and mapped program learning and practical projects to relevant technical capabilities.
- Maintained GitHub evidence of weekly academic/practice work, including source code, screenshots, technical notes, database scripts and documentation.
- Prepared role-specific career materials and practised explaining architecture, technology choices and troubleshooting decisions.
