AXL ESPIRITU

TARGET ROLE: SOFTWARE ENGINEER — iGAMING

CONTACT

Darwin, NT

0466587981

heyitsmeaxl@gmail.com

www.github.com/eyeksel

TECHNICAL SKILLS

Languages C#, JavaScript, TypeScript, Python, SQL, HTML/CSS

Frontend React, Vue.js, Angular, Vite

Backend & APIs ASP.NET Core Web API, REST APIs, Node.js, JSON, HTTP, CRUD, CORS

Data SQL Server, SSMS, Entity Framework Core

Tools Git, GitHub, Postman, VS Code, DevTools, npm, Angular CLI

Cloud & Emerging Azure, AWS, Google Cloud, LLM/RAG, WebSockets

EDUCATION

Charles Darwin University - Australia

Masters in Information Technology - Software Engineering / 2025 - Present

Cavite State University - Philippines

Bachelor of Science in Information Technology / 2015 - 2019

FOCUS AREAS

- REST API CRUD design
- Multi-frontend integration
- SQL Server data access
- Client/API/DB debugging
- Framework comparison

EVIDENCE

Weekly source code, screenshots, notes and database scripts maintained on GitHub throughout the program.

PROFESSIONAL SUMMARY

Software development student with academic and practice-project experience building, testing and debugging full-stack applications using C#, ASP.NET Core, TypeScript, React, Vue.js, Angular, Entity Framework Core and SQL Server. Experienced with REST API CRUD workflows, multi-frontend integration and troubleshooting across client, API and database layers, with additional learning in Node.js, Python, WebSockets and cloud technologies.

ACADEMIC / PRACTICE PROJECTS

Multi-Frontend Full-Stack Task Manager | *C#, ASP.NET Core, EF Core, SQL Server, React, Vue.js, Angular*

- Designed a reusable REST backend consumed by three TypeScript frontend implementations.
- Implemented and tested CRUD workflows and persistent SQL Server data access through Entity Framework Core.
- Compared framework approaches to state/data handling, lifecycle behaviour, templates, events and API communication while troubleshooting integration issues.

C# & SQL Server Console Task Manager | *C#, Microsoft.Data.SqlClient, SQL Server*

- Built a console CRUD application with parameterised SQL commands and data readers, providing the foundation for the later API/full-stack implementation.

Frontend Framework Practicals | *React, Vue.js, Angular, TypeScript*

- Built equivalent Task Manager workflows to practise component structure, data binding/state, lifecycle behaviour, event handling and HTTP communication.

Web & Real-Time Technology Practicals | *JavaScript, Node.js, REST APIs, WebSockets, HTML5 Canvas, PixiJS*

- Completed hands-on exercises covering web application, API, real-time communication and browser graphics concepts.

ACADEMIC TRAINING & TUTORIALS

Completed program tutorials and guided practicals in JavaScript, TypeScript, React, Node.js, REST APIs, Python, C#, .NET/ASP.NET Core, Entity Framework Core, SQL/SQL Server, Vue.js and Angular, plus Azure, AWS, Google Cloud, LLM/RAG concepts, WebSockets, HTML5 Canvas and PixiJS.

- SQL practice included SELECT, SELECT TOP, DISTINCT, WHERE, ORDER BY, INSERT, UPDATE, DELETE, NULL handling and AND/OR/NOT conditions.
- Cloud and emerging-technology learning introduced Azure, AWS, Google Cloud, LLM and RAG concepts through structured study and practical exploration.

ACADEMIC / ENGINEERING PRACTICE

- Researched software engineering and iGaming-oriented role requirements and aligned program learning with relevant development skills.
- Used GitHub to organise academic source code, screenshots, notes and project documentation while excluding generated build/dependency outputs.
- Tested backend endpoints independently before frontend integration to isolate faults between UI, API and database layers.
- Practised explaining architecture and trade-offs across frontend, REST API, ORM and database components.
